

MARKO JOVANOVIĆ

Software Developer

About Me

I come from a world where discipline is not a buzzword - it's a lifestyle. As a long-time sports enthusiast and competitive training junkie, I bring the same energy to debugging that others bring to game day.

Apart from coding, I've always enjoyed reading about history and archaeology. That lead me on a path where I found myself reading medieval scripture with relative ease.

Language

- Serbian (native)
- English (fluent)
- German (basic)
- Russian (minimum)

Experience

Sperasoft, a Keywords Studio **Belgrade - Serbia** **Gameplay engineer** **2024 - 2025**

Working at Sperasoft was a part of their engineering internship program which started in August 2024 and ended in January 2025.

As a gameplay engineer I spent my time learning and getting familiar with Blueprints and Unreal C++ while working on a game called Shrapnel. Most of my tasks revolved around bug fixing and implementing various fun in-game abilities.

Quectel Wireless Solutions R&D **Belgrade - Serbia** **Android driver engineer** **2025 - present**

Time spent within Quectel as a BSP engineer gave me an opportunity to gain knowledge which might not have been possible to gain anywhere else at the time.

Working as an engineer in embedded world gave me an opportunity to dive into Linux kernel mechanics both in internal and client projects. In particular, my day to day tasks were to solve problems related to device charging and USB with occasional work on GPIO drivers and sensor bringup. Rockchip and Qualcomm are platforms which I've worked with.

Also, I've held knowledge sharing sessions where I presented my research on Arm TrustZone technology and Qualcomm's Secure Execution Environment built on top of it.

Personal traits

- Problem solving
- Communicates clearly
- Fast learner
- Takes responsibility
- Team player
- Critical thinking

Technical skills

- Git
- Docker
- Linux
- Unreal Engine

Programming languages

- C/C++
- Go
- Java
- Python

Frameworks

- Springboot
- NodeJS
- Angular
- Flask
- Gin

Databases

- MySQL
- PostgreSQL
- MongoDB

Self-exploration

- Rust
- React
- Flutter

Education

School of Electrical Engineering at University of Belgrade

Bachelor of Software Engineering
2018 - present

Accomplishments

- Winner of 2022 Nordeus QA Code Challenge

Professional Projects

- Shrapnel - First person shooter centered around team combat and collecting precious resource - Sigma
- Contribution to USB and power management subsystems within Linux kernel on various Quectel modules (SC200E, SC668S, SC680A, SG368Z etc.)

Academic Projects

- OS Kernel - Implementation of system calls for RISC-V processor emulated using QEMU
- Compiler - Implemented a compiler for Microjava language developed for teaching purposes
- Restaurant management - Web application built using MEAN stack
- Explore Serbia - Team project where main focus was to learn to work in a team and use Git to build an app using CodeIgniter 4
